PROFESSIONAL SUMMARY

Software engineer with 3.5+ years of hands-on experience with Azure services using .NET (C#), React and SQL, who loves solving complex problems, is dedicated to his work, and has a proven record of timely delivery and client appreciation. Single-handedly built a system used by more than 75,000 learners, and an Azure architecture that keeps 500,000+ students in sync at 1–2 million events a day. Completing an MSc in Software Engineering (Machine Learning) at the University of Limerick in 2026, with a dissertation on *A Comparative Study of Convolutional Neural Networks for Dietary Analysis*.

AREAS OF EXPERTISE

PROFESSIONAL SKILLS	API Integration | System Design | Production Support | Independent Ownership | Performance Optimisation | Client Communication | Mentoring
TECHNICAL SKILLS	.NET (C#) | React.js | JavaScript | Python | SQL | Ruby on Rails | HTML/CSS | Azure (Functions, Event Hub, Service Bus, etc.) | AWS | Docker | Git & GitHub

PROFESSIONAL EXPERIENCE

ENGINEER, QualityAI (formerly Qualitest) | Noida, India **Apr 2023 – Aug 2025**

Delivery engineer on the account for Penn Foster Inc. (US), an online education provider serving over 500,000 learners. Owned features end to end, from design through release and production support.

- Built an AI-assisted grading application from scratch that now serves **75,000+ learners**, connecting to the university's learning platform through LTI 1.3 so students sign in once and grades flow back automatically (React, .NET, SQL).
- Sole engineer on the integration that kept **500,000+** learner records in sync during a platform migration. A serverless .NET service on Azure processes **1–2 million events a day** through Event Hub and Service Bus, reconciling grades into the student records system.
- Worked across nearly every project on the team, from legacy code to new builds, using clean architecture and CQRS.
- Set up and maintained the CI/CD pipelines for each of those projects.
- Ran in a Scrum setup with daily stand-ups, sprint planning and retrospectives, and helped break larger pieces of work into estimated tickets.

GRADUATE ENGINEER, QualityAI (formerly Qualitest) | Noida, India **Jan 2022 – Apr 2023**

Maintained and improved live systems on the same client account, working across a legacy Ruby on Rails codebase and customer-facing components of the learning platform.

- Maintained a production Ruby on Rails application on Heroku, handling defect triage and fixes to keep the service stable for daily users.
- Redesigned the document-printing widget students use to save coursework as PDFs, rebuilding how content is assembled and delivered.
- Cut download times by 70% through targeted performance work, a difference users feel most on large course materials.

EDUCATION

MSc Software Engineering (Machine Learning), University of Limerick, *Ireland* | 2025–26 | QCA 3.37 (First Class Honours)

BTech Information Technology, Noida Institute of Engineering & Technology, *India* | 2018–22 | CGPA 7.98

CERTIFICATIONS & RECOGNITION

Microsoft Certified: Azure Fundamentals (AZ-900), Microsoft | 2025

.NET Development — Foundation, QualityAI | 2024

HighQ Award Winner, QualityAI | 2023 & 2024, awarded two years running for delivery quality

STEM Mentor, Teen-Turn Programme, University of Limerick | 2025 & 2026
